Longest Palindromic Substring

5. Longest Palindromic Substring

Medium   👍 22098   👎 1271   ♡ Add to List   ⎙ Share

Given a string `s`, return *the longest palindromic substring* in `s`.

A string is called a palindrome string if the reverse of that string is the same as the original string.

Example 1:

```
Input: s = "babad"
Output: "bab"
Explanation: "aba" is also a valid answer.
```

Example 2:

```
Input: s = "cbbd"
Output: "bb"
```

Constraints:

- `1 <= s.length <= 1000`
- `s` consist of only digits and English letters.
